

## Attaching Milling Heads to Your Mill

The Wonder Junior Plus comes with new improved Bolt-able milling heads as seen in the picture below. They are simple to attach to your mill by doing the following:

1. Remove the two nuts and washers from the back of the Milling head, either stone or stainless steel whichever you are using.
2. Hold the flour guide in place on the front of the mill as you guide the two bolts from the back of the milling head onto the mill. The two bolts will go through the mill and the lower post on the mill will fit into the lower hole in the milling head. There is only one way for the head to fit so don't worry it won't go on if it is not correct.
3. While holding the milling head and flour guide in place with your hand, use your other hand to put the washers on the bolts extending out of the back side of the mill (as seen in the picture below).
4. While continuing to hold the milling head and flour guide in place hand tighten the nuts onto the bolts as tight as possible with your fingers only -- finger tight only **"do not use a wrench or tool to tighten the nuts" Finger Tighten Only.**
